

Solarious Foundation

Investment Overview

Confidential

Company

Company: Solarious Foundation d.b.a of Crypto Engine LLC

Industry: Renewable Energy Infrastructure • Blockchain • Environmental Commodities

Stage: Mainnet Launch • Pre-TGE • Commercialization

Website: <https://solarious.us>

Executive Summary

Solarious introduces a proprietary Proof-of-Energy protocol designed to verify renewable energy production and enable the tokenization and settlement of energy-backed environmental commodities.

Unlike traditional blockchain projects, Solarious addresses an existing infrastructure problem within the renewable energy industry using technology that is operational today.

Multiple Investment Opportunities

Solarious offers different ways for qualified investors and strategic partners to participate, depending on their investment objectives.

Use of Proceeds

Investment proceeds will primarily support:

- Commercial expansion
- Product development
- Exchange listings and liquidity
- Strategic partnerships
- Business development
- Marketing and ecosystem growth
- Regulatory and operational scaling

Why Solarious

- Proprietary Proof-of-Energy consensus protocol
- Layer-1 blockchain purpose-built for renewable energy
- Working technology with live demonstrations
- Mobile applications launching on iOS and Android
- Multiple revenue opportunities across infrastructure, validation, mining pool and environmental markets
- Positioned at the intersection of renewable energy, blockchain infrastructure, and digital environmental assets

Why Now

Several major trends are converging:

- Global electrification is accelerating energy demand.
- Demand for renewable energy expanding worldwide.
- Environmental commodity markets increasingly require verifiable production data and tokenizing commodities is gaining speed.
- Blockchain infrastructure enables transparent, automated settlement.
- Artificial intelligence and digital infrastructure are driving unprecedented electricity consumption.

Solarious combines these trends into a single platform designed to verify renewable energy production and create the foundation for next-generation energy markets.
